

13th International Conference & Exhibition - 2022

On two very important aspects:

Moving to Cleaner Environment for Mobility and Powering used in Prime Movers... through Regulation and Emissions Control by Aftertreatment

Internal Combustion Engines, Future fuels and the role that Emission Control Devices should play in the transition towards Near Zero Emissions

After a long wait of over two years, ECMA are pleased to invite you to physically participate in the upcoming Emission Control Technologies - ECT 2022 Conference and Exposition

Kindly block your calendar for this momentous event!
10th and 11th November 2022

at

Hotel Radisson Blue Plaza, New Delhi Airport

Two years into the roll-out of BS VI Emission Norms it is now appropriate to discuss and highlight areas that need special attention. In addition to vehicles, the Emissions Road Map for NRMM, CEV, Generator Sets and Stationary Engines, have also commenced to be implemented. What are the next steps? Should regulation be the driver and if so, what are the directions?... should we move to BS VII and beyond in the control of emissions. What are the advances that aftertreatment is making to move towards near-zero emissions?

The future of Internal Combustion Engines (ICE) is being challenged by new and alternate technologies such as electrification of mobility and powering sources. But ICE fuelled by fossil fuels has been the mainstay of mobility and energy for the past century and more. ICE still have an active life with alternate fuels, synthetic fuels and hydrogen. How will emissions control through after-treatment, play a part in the move towards near Zero Emissions?

ECT 2022 is meant specifically to address these, as well as to look to the near future to forthcoming regulations such as IRDE and World Harmonized Test Procedures, which will ensure that vehicles that come on the roads are Emissions Compliant in the true sense.

All this and more, at the special Two Day World Automotive and Non Road Conference which provides an appropriate platform and opportunity for Global and India-based Automotive and Powertrain Industry Stakeholders, Analysts and Policymakers to discuss current issues and challenges facing Industry and the way forward in this field.

We at the ECMA are also keen on inviting you to showcase Products / Technologies / Innovation / Services through ECT 2022 Exposition, that shall be held along with the Conference.

Who Should Attend:

- Industry / Technical Experts from the Global Arena
- Automotive and Powertrain OEM's and R&D Experts
- Test Agencies / NGO's
- Govt. / Legislative Personnel
- Environmentalists
- Academicians

The overall theme for the conference this year is ***Moving towards Near Zero emissions with Cleaner IC Engines using Innovative Emission Control Technologies***

Sessions and Subjects for discussion:

Watch out for our further releases detailing Sessions and Subjects for discussion with experts in the industry. Details, shall follow soon and will also be updated from time to time on the ECMA website: <http://www.ecmaindia.in>

The ECT Conference is recognised as a bright and path-breaking event in the Indian emissions control arena and this year, after a long wait through the pandemic we expect robust, energetic and illuminating participation from the entire Automotive and Powertrain Community for this benchmark International Forum in New Delhi, India.

So..block your diary and await further communication from us!
