
Emission Control Policies and Solutions for Large Off-Road Diesel Engines

ECT-2015

September 2015

Dr. Joe Kubsh

Manufacturers of Emission Controls Association

www.meca.org

Clean Diesel Technology Driven By a Decade of U.S. EPA Mobile Source Emission Regulations

Average Benefit:Cost = 20:1

Tier 3 Light-Duty

final rule 2014

fully phased in 2025

Diesels held to same standards as gasoline vehicles

Diesel sulfur now < 15 ppm

Ocean-going Vessels

final rule 2009; IMO ECA in 2010

**ECA: 1000 ppm Sulfur in 2015;
80% lower NOx by 2016**

Heavy-Duty Highway

final rule 2000

Sulfur now < 15 ppm

fully phased in 2007-2010

Locomotive / Marine Tier 4

final rule 2008

Sulfur now < 15 ppm

fully phased in 2017

Nonroad Diesel Tier 4

final rule 2004

Sulfur now < 15 ppm

fully phased in 2015;

basis for new stationary engines

Tier 4 U.S./Stage IV EU Off-road Diesels Offering a Wider Range of Emission Controls

EPA Tier 4 Interim / EU Stage IIIB
 EPA Tier 4 Final / EU Stage IV

| KW | EPA | HP | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | |

(NOx + HC) / CO / PM (Oxides of Nitrogen + Hydrocarbons) / Carbon Monoxide / Particulate Matter (g/kW-hr)
 NOx / HC / CO / PM Oxides of Nitrogen / Hydrocarbons / Carbon Monoxide / Particulate Matter (g/kW-hr)
 * Combines regulatory powerbands with same emission levels

50%+ higher off-road limits:

PM (g/kWh)
 0.020 off-road
 (0.04-0.06 for Tier 4 loco/marine)
 vs.
 0.013 on-road

NOx (g/kWh)
 0.40 off-road
 (1.8 for Tier 4 loco/marine)
 vs.
 0.26 on-road

Tier 4 Final includes a variety of emission control solutions including: EGR+DOC, DOC+SCR, EGR+DPF, DPF+SCR

EU considering a Stage V standard that could be similar to Euro VI, including a PN limit; EU Stage IIIB/IV and U.S. Tier 4 Standards utilize the Nonroad Transient Cycle (NRTC)

Clean Diesel Technology Expanding into U.S. Off-road Applications with & without DPFs

Tier 4 Tractors with SCR

Larger Tier 4 Machines with DPF+SCR

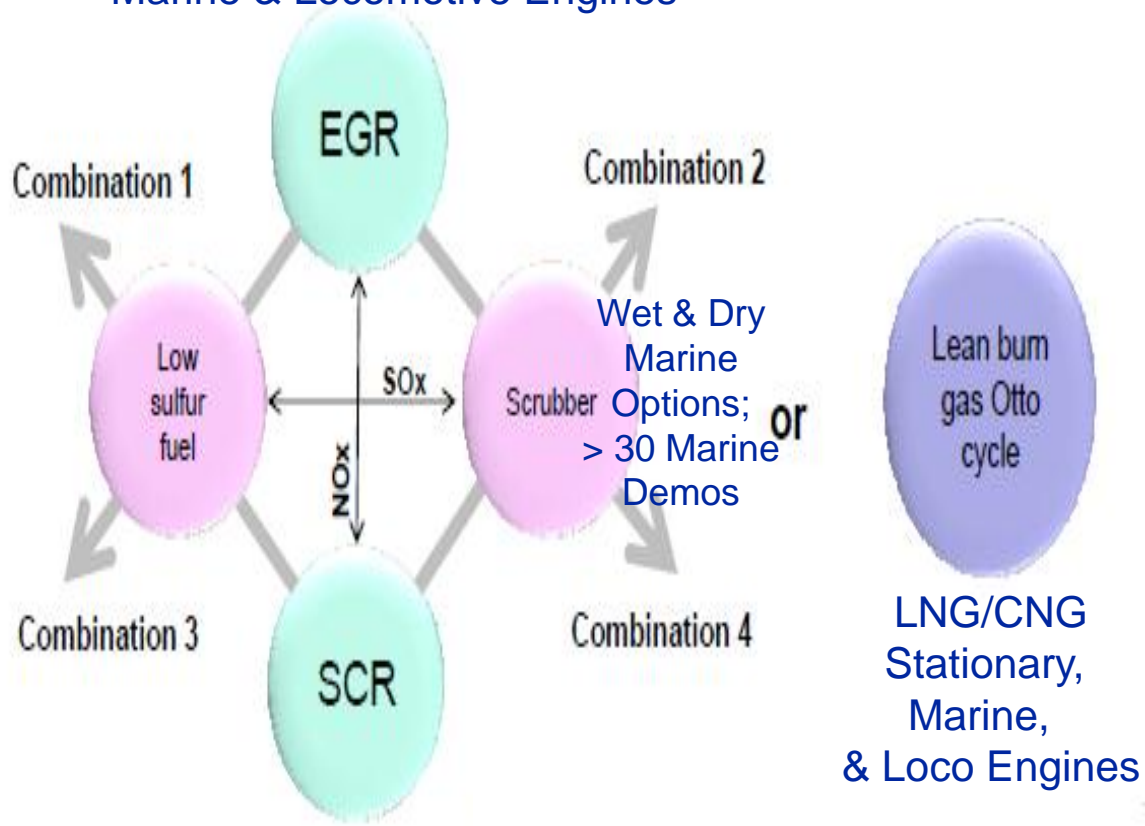

Locomotives with DPFs and/or SCR systems

Growing Experience with Large Diesel Engine Emission Control Options

Emerging for
Marine & Locomotive Engines

- 500 Ship Installations;
- Lots of Stationary Engines;
- A few Locomotive Demos

Growing Number of DPF Demos
on Marine & Locomotive Engines

SCR Applications Moving from Stationary to Mobile Sources: Urea Infrastructure Expanding

Tier 4
Off-Road
Engines

2010+
Heavy Duty
Vehicles

Power Plants

Gas Turbines

Tier 4
Locomotive
Engines
for Pass. Rail

Waste Incineration

Tier 2/3 Diesel Passenger Cars

SCR
Products

Marine
Engines

Stationary
Engines

Selective Catalytic Reduction: High NO_x Conversion Emission Control Technology

Ammonia NH₃

Nitrogen oxides NO_x

SCR catalyst

SCR Efficiencies
> 90% on Large
Diesel Engines
Under Full Load

Commercial Marine EPA NOx Emission Standards

North American ECA:

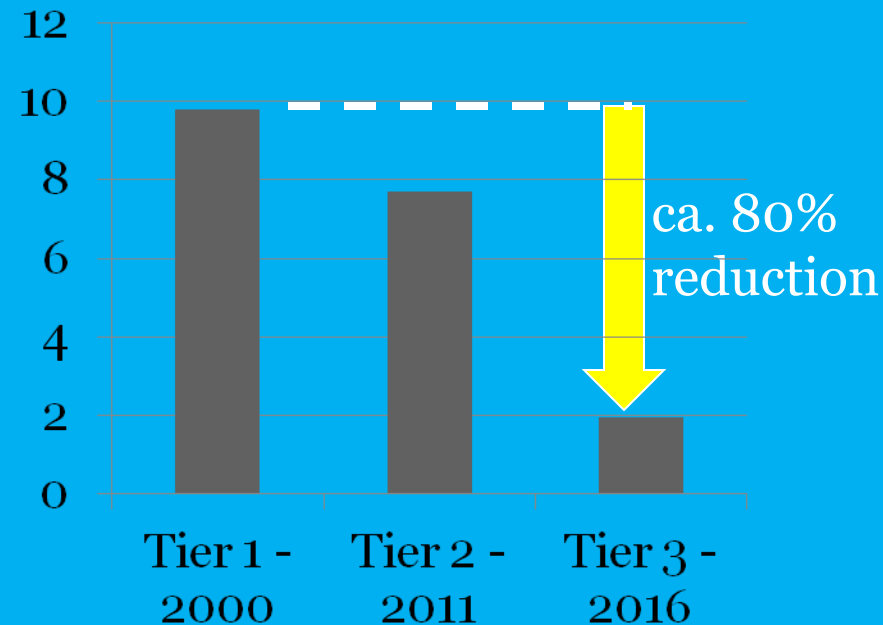

1% sulfur limit began August 1, 2012

0.1% sulfur limit begins January 1, 2015

U.S. has also added Puerto Rico & the U.S. Virgin Islands to the North American ECA

Category 3 Marine NOx Limit, g/kWh

Category 3: 30 liters/cyl. or greater;
max. speed 2000 rpm or greater;
Tier 3 limits apply in ECA
for new vessels starting in 2016

SCR Marine Applications Includes a Variety of Ship Types/Engine Manufacturers/2 & 4 Stroke Engines

Number of various types of vessels with SCR

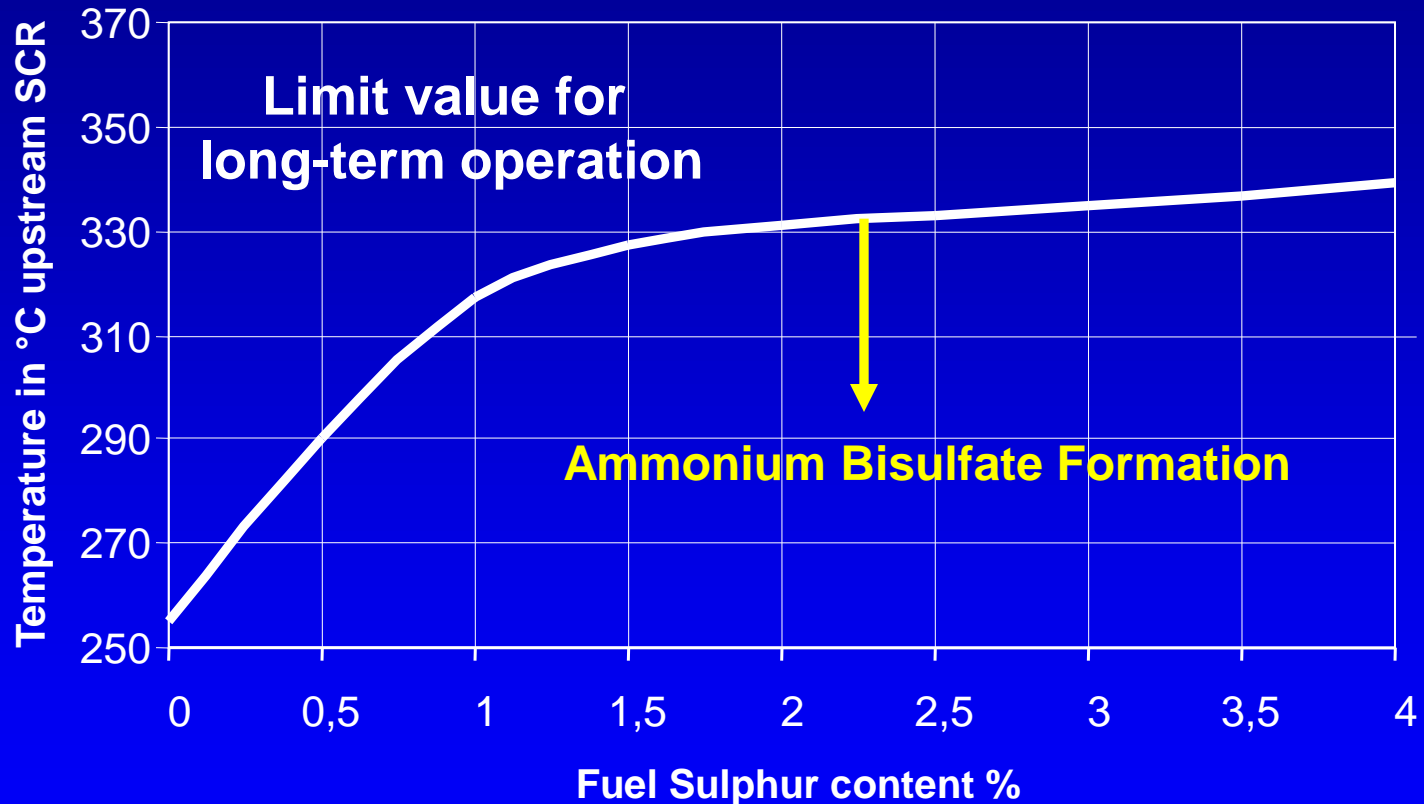

Engine manufacturer on SCR installed vessels

Total number of vessels with SCR installations

SCR Experience / Heavy Fuel Oil / V-SCR

U.S. Clean Diesel Marine Demonstrations

SCR Retrofits on 2 Staten Island Ferries

DOC + Crankcase Filter Retrofits
On Mississippi Barge Tugs

DPF+SCR Retrofit on LA Port Tug

Long Beach Hybrid Tug
Retrofit

U.S. Clean Diesel Locomotive Demonstrations

Passive DPF Retrofits on Tier 2 Gen-Set Switcher Loco

Tier 4 Gen-Set Switcher with DPFs

Tier 2 Loco Retrofit with EGR and DOCs/DPFs

GE Tier 4 Line Haul Loco with EGR

Conclusions

- U.S. regulations have driven the development and introduction of clean diesel emission technologies in both on-road and off-road diesel engines
- Use of ULSD allows for the opportunity to employ best available technologies for controlling PM and NOx
- U.S. emission regulations for large diesel engines (stationary, marine, locomotive) are less stringent than in the heavy-duty highway sector allowing for engine-based controls for PM (no DPFs), and solutions including EGR or SCR for controlling NOx
- Interest in low cost natural gas engines for stationary, marine, and locomotive engines; fueling infrastructure not yet well developed
